

新冠病毒数据分析系列公益讲座 COVID-19 Data Analysis Webinars

第四讲、疫情数据空间显示分析

主讲人：关蔚禾，哈佛大学地理分析中心执行主任

付品德，美国ESRI开发部项目主管

点评人：隋殿志，阿肯色大学研究副校长、

地理科学系杰出教授

主持人：林晖，江西师范大学地理与环境学院院长

合办单位：江西师范大学地理与环境学院

北京时间 2020年5月22日上午9-10点

提纲/Outline

1. 疫情数据地图网站回顾 Overview of selected COVID-19 data mapping and visualization websites (Wendy Guan)
2. 疫情数据时空动态显示 How to animate COVID-19 spatial temporal data using ArcGIS Online (Pinde Fu)
3. 疫情数据时空地图制作 How to map COVID-19 data with space and time in ArcGIS Pro (Wendy Guan)
4. 空间疫情数据解读 Beyond visualization: understanding COVID-19 with spatial analysis (Wendy Guan)

Summary and discussions after each section 每节附小结和讨论

Section 1. Overview of selected COVID-19 data mapping and visualization websites

疫情数据地图网站回顾

World or U.S. Rankings >> Situational Heatmap

In the main map, a country or region's infection level is measured by the # of today's active/remaining confirmed cases. The gray slash texture indicates no previous cases are discovered; the green texture means the region in which all the infected cases have recovered.

 Infection Case(s) indicates one or several confirmed infected individual(s) in the U.S., excluding those were identified from the Diamond Princess. The dataset of the infected cases are continuously enriched from different data portals such as 1point3acres and state officials. Notably, each case was geocoded to an approximate location within the county which reported the case. The location is by no means identical to the exact address

The Online Map by Esri's StoryMaps team

Mapping the novel coronavirus pandemic

Wuhan is a major transit hub for the region, with direct connections to dozens of other cities in China. The coronavirus outbreak coincided with the lunar new year, the most popular time of the year for domestic travel.

By the time the quarantine had been implemented there, an estimated 5 million people who were potentially exposed to the virus had already left Wuhan, complicating efforts to contain the virus.

Show international flights

This map: High-speed rail (2016) and domestic flights into and out of Wuhan (2018).

Section 1 Summary and Discussion

- Who created the web maps?
 - University researchers
 - News media
 - Commercial companies
 - Non-profit organizations
 - Government agencies
 - Private citizens
- What are the maps built with?
 - Proprietary systems (e.g. ArcGIS, Tableau, SafeGraph)
 - Open source tools (e.g. Carto, Leaflet, D3, Bootstrap)
- What are the themes of the maps?
 - Confirmed cases, Death
 - Social distancing enforcement
 - Readiness for re-opening
 - Travel and transmission
- What are the interface formats?
 - Dash board (linked to charts, graphs, tables, etc.)
 - Story map (with narratives)
- How are the maps' appearance?
 - Polygon shadings
 - Circular markers
- Geographers' concerns
 - Modifiable areal unit problem (MAUP)
 - Projection distortion

Section 2. How to animate COVID-19 spatial temporal data using ArcGIS Online

疫情数据时空动态显示

注:

- Arcgisonline.cn基于ArcGIS Enterprise
- ArcGIS Online提供免费试用账号

时空数据的常见类型

连续移动

分散发生
(非连续)

固定位置，属性变化

范围的扩张或退缩

例如一个感染者的行程轨迹

例如一个行区的确诊人数

时空数据的常见格式

常见时空序列数据格式：横向增长

location name	x	y	1/22/2020	1/23/2020	1/24/2020	...
xxx	1	4	12	

不符合数据库设计的基本原则：

- **Schema不具有扩展性**：表的字段可能太多（太宽），取决于时间跨度和时间间隔
 - 一年的跨度x每一小时一个读数：字段数=365*24=8760个！
- **Schema不具有固定性**：例如，每天要改表结构，要增加一列

Esri推荐的时空序列数据格式：竖向增长

location name	Shape	timestamp	value
xxx	...	1/22/2020	1
xxx	...	1/23/2020	4
xxx	...	1/24/2020	12
		...	

符合数据库设计的基本原则：

- **Schema具有固定性**：
 - 时间跨度和间隔只影响行数，不影响列数
- **Schema具有扩展性**：
- **可以描述每一个时间点位置的变化**
 - 满足前述的各类时空数据：连续移动、分散发生、固定位置...

注：每行也可以有两个时间字段：开始时间、结束时间

时空数据的常见转换

保存这些字段

这些字段从列转换成行

location name	x	y	1/22/2020	1/23/2020	1/24/2020	...
XXX	1	4	12	

location name	x	y	timestamp	value
XXX	1/22/2020	1
XXX	1/23/2020	4
XXX	1/24/2020	12
			...

MassGIS is the state's one-stop-shop for interactive maps and associated descriptive information. You can view and explore our extensive library of map information using our on-line mapping viewer, OLIVER and other web maps. GIS users can access data and web services for their software and applications. MassGIS also coordinates GIS activities in state and local government and sets GIS data standards.

14 county polygons, **658** data records (confirmed case counts per county per day for 47 days). How to associate multiple days' data to the same county - quickly?

Section 3 Summary and Discussion

- There are many ways to visualize data in space and time
 - Choropleth vs. other types of symbology
 - 2D vs 3D
 - Time animation on map
 - Time chart as feature symbols

Select the most appropriate way by the purpose of communication

- How time is managed in spatial data
 - Each time step as an attribute field (column)
 - Each time step as a value in the Time field (row)
 - Each time step as a separate layer (raster)
- Tips and tricks when working with time
 - Data type definitions
 - Directions of table join
 - Including Shape when Transpose

Section 4. Beyond visualization: understanding COVID-19 with spatial analysis

空间疫情数据解读

What is an Environmental Justice Community?

In Massachusetts a community is identified as an Environmental Justice community if any of the following are true:

- Block group whose annual median household income is equal to or less than 65 percent of the statewide median (\$62,072 in 2010); or
- 25% or more of the residents identify as a race other than white; or
- 25% or more of households have no one over the age of 14 who speaks English only or very well - English Isolation

Local Bivariate Relationships

Parameters Environments

Input Features: MAcovid91Town2wksEJ

Dependent Variable: April_29

Explanatory Variable: Population in EJ BlockGroups

Number of Neighbors: 30

Number of Permutations: 199

Output Features: MAcovid91Town2wksEJ_BiVar

Enable Local Scatterplot Pop-ups

Level of Confidence: 90%

Advanced Options

Apply False Discovery Rate (FDR) Correction

Scaling Factor (Alpha): 0.5

Local Bivariate Relationships (Spatial Statistics Tools)

Analyzes two variables for statistically significant relationships using local entropy. Each feature is classified into one of six categories based on the type of relationship. The output can be used to visualize areas where the variables are related and explore how their relationship changes across the study area.

Understanding the Findings and Limitations

- Positive correlation between COVID-19 confirmed case count and Environmental Justice Community population in **some towns** in Massachusetts.
- Both variables are **normalized** against total population.
- The case count is up to **April 29th**, 2020.
- The correlation is only significant in some towns in eastern Massachusetts. These towns are outside of the Boston metropolitan but close to it, on the I-495 beltway.
- Further analysis is needed to understand why. One hypothesis is that it may depend on the stage in the outbreak, assuming the disease is transmitted from Boston outward.

Common Issues in Spatial Statistical Analysis

- Dependency among variables
 - Normalization
 - Spatial autocorrelation
- Data exploration vs. prediction
 - Bi-variation vs. Regression
 - Correlation vs. Causation
- Missing variables, e.g.
 - Public transportation density
 - Building density
 - Multi-unit vs. single-unit residential condition
- The time factor
 - Space as proxy for time, e.g. distance to Boston International Airport
 - Modified start time, e.g. first day when a variable reaches a threshold

Section 4 Summary and Discussion

- Essential resources for spatial data visualization and analysis research

- The Spatial Data Lab (CDL) provides such resources in an integrated platform to speed up research (<https://projects.iq.harvard.edu/chinadatalab/resources-covid-19>)

Acknowledgement

This presentation included contributions from the Coronavirus Visualization Team – a global group of students producing visualizations and datasets on the COVID-19 Pandemic (<https://scholar.harvard.edu/cvt/about>).

In particular:

- **Akhil Kumar** contributed to the gathering and formatting of MA infection cases data for mapping in ArcGIS Pro;
- **Viraj Kacker** and **Scott Blender** contributed to the gathering and reviewing of online COVID-19 visualization websites;
- **Jerry Sun, Asad Yamin** and **Anurag Koyyada** contributed to the gathering and reviewing of published papers on COVID-19 related geospatial analysis;
- **Lucas Chu** contributed to the coordination of the collaboration.

Two questions for discussion

- Let's pay more attention to data quality and validity;
- Let's read and interpret all maps with a healthy level of skepticism

The Politics of Numbers

William Alonso

Paul Starr
editors

Other relative of person in column 1, exact relationship, such as mother-in-law, e, grandson, etc.	If no such person, start in this column with any adult household member.	If not related to person in column 1, Roomer, boarder Partner, roommate Paid employee
